

Nexans delivers 66kV accessories to support East Anglia THREE offshore wind farm

PRESS RELEASE

- Nexans selected by ScottishPower Renewables to supply 66kV accessories for the East Anglia THREE offshore wind project
- Integrated offering provides a unified solution for safe, reliable electrical connections across the full power distribution architecture
- Collaboration reinforces Nexans' role as a one-stop supplier, enabling seamless system integration across multiple partners

Paris, December 18, 2025 – Nexans, a global leader in electrification and cable systems, has been selected by ScottishPower Renewables as a key supplier for the East Anglia THREE offshore wind project. Part of the East Anglia Hub, East Anglia THREE comprises an offshore wind farm approximately 69 kilometres off the Suffolk coast, with an onshore cable route transporting green energy to a converter station in Bramford¹.

Such large-scale installations demand seamless integration, high reliability and fault-free performance across vast distances and harsh marine environments. Nexans, chosen for its technical response, engineering expertise, integrated approach and flawless reliability record, is helping ScottishPower Renewables overcome these challenges by supplying the 66kV accessories through its dedicated Business Unit.

As utility providers continue to invest in clean, renewable energy infrastructure, building and maintaining offshore wind farms remains one of the most complex engineering feats in the sector. Nexans' accessories, including T-connectors, bushings, junction boxes and cable lugs, and pre-terminated power cables², will support safe and consistent electrical performance across East Anglia THREE. All Nexans components are field-proven and engineered to deliver reliable electrical continuity from the turbine nacelle through to the offshore platform.

"The East Anglia project represents a critical step forward for the UK's offshore wind ambitions," said Elyette Roux, Executive Vice President PWR-Grid & Accessories at Nexans. "Our role is to ensure that ScottishPower Renewables can move forward with confidence, supported by a proven, end-to-end cable solution. Our integrated power accessories offering is designed to deliver a tailored, turnkey solution that supports performance, reliability and seamless execution across the entire installation. We are proud to bring together our global engineering expertise and trusted ecosystem of partners to deliver a resilient, high-quality infrastructure that will help accelerate the UK's clean energy future."

Pedro Fernandez, EA3 Project Director at ScottishPower Renewables, added: *"EA3 will be a vital part of the UK's climate ambitions, providing clean, green electricity to over 1.3 million homes. Nexans' proven expertise, tailored engineering approach and strong track record in offshore environments will help us deliver this 95 turbine windfarm to the highest standard. Their integrated offering plays a vital role in ensuring the project operates safely and reliably throughout its lifecycle."*

By combining advanced engineering with deep experience in offshore renewable applications, East Anglia THREE reflects Nexans' ongoing commitment to enabling sustainable electrification and supporting the infrastructure that underpins the global energy transition.

About Nexans

Nexans is the global pure player in sustainable electrification, building the essential systems that power the world's transition to a connected, resilient, and low-carbon future. From offshore and onshore renewable energies to smart cities and homes, Nexans designs and delivers advanced cable solutions, accessories and services that electrify progress safely, efficiently, and sustainably.

With over 140 years of history, through three core businesses: PWR Transmission, PWR Grid, and PWR Connect, Nexans blends deep industry expertise with cutting-edge innovation to accelerate the energy transition and better meet its customers' needs. Its unique E3 model, focused on Environment, Economy and Engagement, drives every action, aligning performance with purpose.

Nexans operates in 41 countries with 28,500 people and generated €7.1 billion in standard sales in 2024. As recognized climate action leader, Nexans is committed to Net-Zero emissions by 2050 aligned with the Science Based Targets initiative (SBTi) and expanding energy access through the Fondation Nexans.

Nexans is listed on Euronext Paris, Compartment A.
