

Nexans strengthens its worldwide production capacity for the wind energy industry

PRESS RELEASE

- **Nexans has inaugurated a new cable harness production facility in the city of Tianjin, China.**
- **Nexans' global wind power presence includes cable harness production facilities in China, Denmark and Poland.**
- **Nexans now has the global production capacity to produce more than one million harnessed cables every year.**

Paris, July 2, 2021 – Nexans strengthens its global wind network and increases its production capacities to meet the growing demand for clean energy and electricity in the world. Nine months after the company opened a similar facility in Poland, Nexans extends its presence in China and unveils a new cable harness production facility in the city of Tianjin.

The opening has been marked by an official ceremony on June 30. The facility will increase Nexans' production capacity in the country and help bolster China's clean energy supply chain during a time of unprecedented market growth.

The facility has 3,000 square meters of production and storage space and will manufacture a wide range of wind cable products and solutions. Each product will go through six stages of control from raw material to finished goods, ensuring all products are made to the highest standard. Solutions produced at the facility will include M12 sensor cables, valve connectors, and customized solutions specific to OEM needs.

Julien Hueber, Executive Vice President Industry Solutions & Projects, said *"It's an exciting time for wind power in China. The country's wind sector is currently the same size as the rest of the world combined - and it continues to grow as the country commits to reducing its CO2 emissions. Furthermore, the falling cost of wind power, efficiency increases, and attractive policies are expected to boost growth even further. One of Nexans' top priorities is to electrify the future by connecting the world's renewable energy sources to ensure electricity supplies are secure, reliable, and efficient. Our new facility means Nexans is perfectly positioned to help local original equipment manufacturers drive China's wind power revolution as more wind turbines are built in the country."*

The three facilities in China, Denmark and Poland are part of Nexans' extensive offering in the Industry and Solutions business, supporting a wide range of clients with customized cabling and connectivity solutions. Nexans now has a total production capacity of one million harnesses every year. It also has over 15,000 square meters of global production and storage facilities and a wind power team of over 150.

About Nexans

For over a century, Nexans has played a crucial role in the electrification of the planet and is committed to electrify the future. With around 25,000 people in 38 countries, the Group is leading the charge to the new world of electrification: safe, sustainable, renewable, decarbonized and accessible to everyone. In 2020, Nexans generated 5.7 billion euros in standard sales.

The Group is a leader in the design and manufacturing of cable systems and services across four main business areas: Building & Territories, High Voltage & Projects, Industry & Solutions and Telecom & Data. Nexans is the first company of its industry to create a Foundation supporting sustainable initiatives bringing access to energy to disadvantaged communities worldwide. The Group pledge to contribute to carbon neutrality by 2030.

Nexans. Electrify the future.

Nexans is listed on Euronext Paris, compartment A.
